Exploration of Precious and Base Metals

We strive to **create value** in early stage exploration projects by taking the initial risk that major mining companies will not

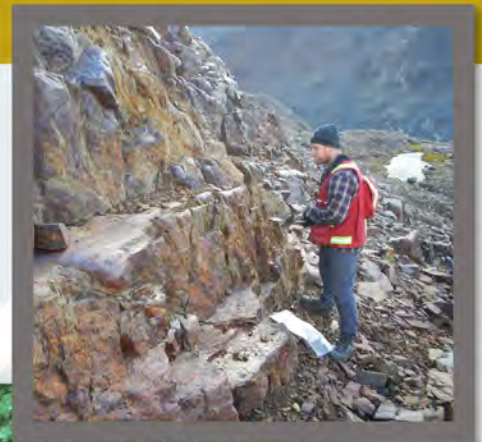

Our aim is to **develop the initial discovery** and prove up a preliminary resource before selling to a mining & development company

Right share structure enables **upside for shareholders**

We select the **right qualified people** for the job and hold community engagement paramount, which is one way we **"de risk"** our projects

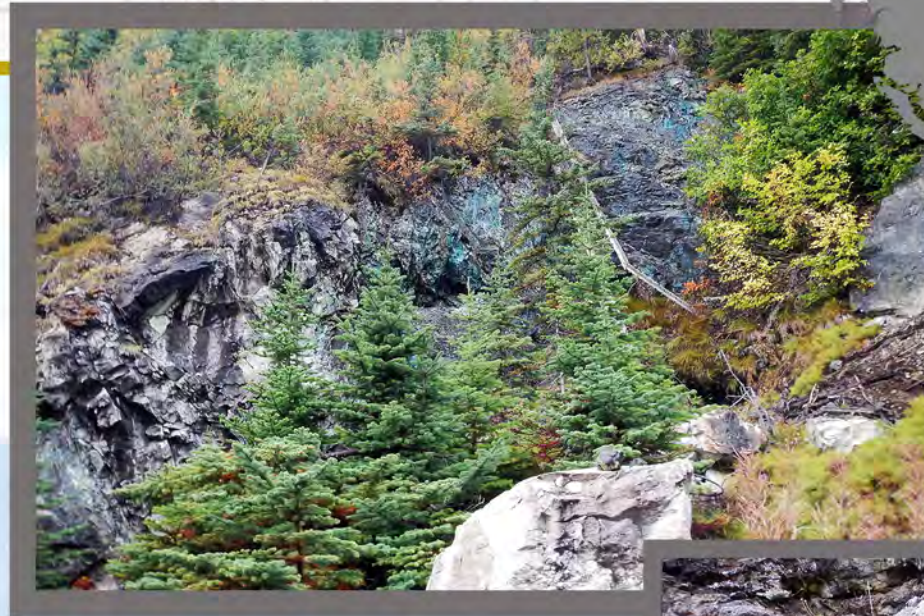

Spending capital on research, **precision and accuracy** before conducting industry leading geological techniques to delineate targets

We are a company that **generates relationships** with people affected by each project and involves them every step of the way

Exploration Results

15 of 18 samples returned copper values of 1.25% to 8.36%.

Both north and south sampling locations yielded gold assays averaging 1.0 g/t with silver as high as 42.0 g/t.

Sampling inside the French Adit yielded consistent copper values of 1.20% + over 50 meters width.

Location & Infrastructure

Consists of 10 mineral licenses encompassing 148.14km².

Located 48 km southwest of Atlin, British Columbia (12-minute helicopter flight, accessible all season).

Services available in Atlin including accommodation, heavy equipment and transportation.

All other services available via Whitehorse 170 km to the North.

Water readily available from Atlin lake & Hoboe Creek.

Moving Forward

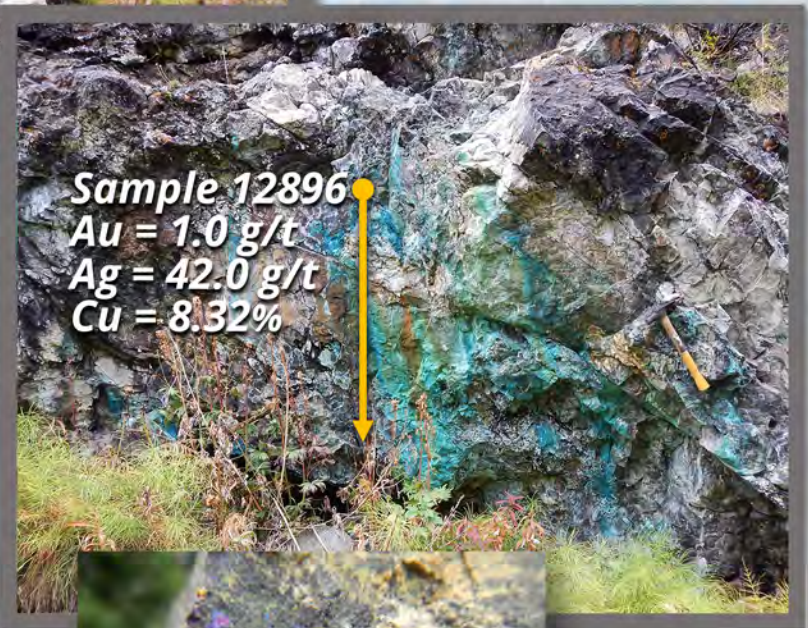

Core Assets has initiated permitting of 10 new diamond drill holes to a historically permitted diamond drilling program of 8 holes, for a total of 18, targeting newly identified chargeability targets outlined in 2019 IP survey.

2 drill holes to test north target (never drilled).

2 drill holes to test south target (in historical area of 175 meters of 0.27% copper).

Land position increased 16.58km² to 148.14km².

Core now holds 100% (15km) portion of Liewelyn Fault Zone with concentration of high-grade metals at surface on property.

Area of "French Adit" where 175.0 meters of 0.27% copper was drilled.

Chip sampling inside adit over 40 meters yielded 0.23 g/t - 0.37 g/t Au & 2.40% - 8.0% Cu.
